

# Agriculture

Growing the world's food supply economically while protecting our precious water resources is a demanding job. That's why we help customers with high-quality irrigation products to maintain healthy crops — whether it's row crops, field crops, or permanent orchards and vineyards. Our innovative and high-precision drip irrigation products save water and energy, while improving yields and quality of produce.

*New Toro agricultural products include:*

**Toro® Aqua-Traxx® with the PBX Advantage.** Building on Toro's long history of innovation in drip irrigation, Aqua-Traxx with the PBX Advantage delivers an unparalleled level of precision and durability. Aqua-Traxx is used by top growers of strawberries, tomatoes, onions, peppers, lettuce, broccoli, celery and numerous other fresh vegetables. **Toro® Aqua-Traxx® Ultra Low Flow.**

Vegetable growers with soils that have low rates of water infiltration can have runoff problems — even with drip irrigation. Utilizing Aqua-Traxx with the PBX Advantage, Toro developed the Ultra Low Flow feature for AquaTraxx which enables growers to use drip irrigation on challenging soils.

## Agriculture *(cont.)*

In response to the needs expressed by growers, Toro has developed a number of innovative programs. Listening to our customers is one of the keys to our success, and the voice of the customer is well represented at Toro.

### **Grower Connection Program.**

Through active participation with university researchers, government agencies and grower associations, this educational initiative aims to help growers better understand the agronomic, environmental and financial benefits of drip irrigation.

**Recycling Program.** Launched in Oxnard, Calif., in 1998, the industry's first drip irrigation recycling program has expanded to cover the entire Western United States. By recycling used drip irrigation products into useable products like garbage bags, plastic lumber and highway barriers, Toro has kept over 3 million pounds of plastic out of our nation's landfills.
