

Golf

St. Andrews in Scotland; Oakland Hills in Michigan; Troon North in Arizona; Mission Hills in China; Celtic Manor in Wales; Leopard Creek in South Africa. Around the world, customers count on our products for pristine fairways, rolling greens and well-groomed bunkers. In 1921, we developed the first fairway mower. Six years later, we shipped our first golf maintenance products overseas. Today, we continue to lead the global market with best-in-class turf maintenance equipment and precision irrigation solutions. In fact, approximately two-thirds of the top 100 courses in the world use Toro irrigation systems.

New Toro golf course maintenance equipment includes:

Greensmaster® Flex 21 And Flex 18 Walk Greensmowers. The Toro Greensmaster Flex 18 and Flex 21 feature Dual Precision Adjustment which allows the cutting units to maintain a level surface while holding critical adjustments. The new 14-blade reel provides enhanced cutting performance at different heights of cut.

Greensmaster® 3150-Q Triplex Riding Greensmower. The new Toro Greensmaster 3150-Q features an innovative new muffler that helps reduce bystander and operator noise, making it the quietest engine-powered riding greensmower in the industry. Retrofit kits are available for the Greensmaster 3050, 3100 and 3150.

Reelmaster® 5010 Series Fairway Mowers. These high-performance fairway mowers offer a host of Toro innovations to ensure improved quality of cut and after-cut appearance. Features the Dual Precision Adjustment cutting system and a lighter overall design to significantly reduce the machine's footprint on the turf. **ProCore® Aeration System.**

The innovative Toro ProCore aeration system helps reduce compaction and build stronger root systems, while offering greater productivity to the golf course superintendent. The new ProCore®

864 and 1298 aerators, operating in tandem with the ProCore Processor, helps aerate and process cores in a single pass to greatly reduce time and effort.

Workman® Mid-Duty MDX And MDE Utility Vehicles. The new Toro Workman MDX and MDE utility vehicles feature a new suspension system that delivers superior ride quality in all applications. The active in-frame torsional pivot joint results in optimum operator comfort, strong traction and stability.

New Toro irrigation solutions include:

Turf Guard™ Wireless Soil Monitoring System. The new Turf Guard System gives users important agronomic data to better manage turf health while conserving valuable water resources. The technology allows grounds professionals to make better decisions about irrigation run times and amounts, salinity levels, aeration, root stress and much more.

835S/855S Series Sprinklers. Toro's most popular series of golf course sprinklers provides precise and efficient irrigation, and maximum flexibility and adjustability. Easy adjustment of the main nozzle trajectory to any of 24 angles — from 7 to 30 degrees — for precise watering in windy conditions or around

bunkers, trees and mounds. **DT Series Sprinklers.** Toro's newest golf sprinkler includes Dual Trajectory settings of 15 and 25 degrees. This allows for easy adjustment of the nozzle trajectory for precise watering in windy conditions or around bunkers, trees and mounds. **Network VP® Field Controller.** A complete, flow-managed watering program that is sent from the central control computer and stored

at the field controller so nightly watering will occur even if communication is disrupted. Comes with wired and/or wireless control for maximum flexibility and cost effectiveness,

and includes an intuitive user interface. **Golf Decoder Control (GDC) System.** The GDC System provides control of golf course irrigation through a series of small decoders buried in the ground. This eliminates the need for above-ground field control satellites and reduces the amount of wire needed to control an irrigation system. Ideal for flood plains, as decoders can be submersed in water, and also help reduce the risk of vandalism.
