

Professional Contractors

Landscape professionals demand an optimal blend of performance, durability and reliability to be productive and profitable. That's why customers turn to Toro for quality zero-turn riding mowers that consistently get the job done fast and deliver an immaculate cut. For building landscapes, our compact utility loaders and walk-behind trenchers tackle heavy work and accomplish hundreds of tasks in a fraction of the time while protecting the delicate turf. And, for contractors who design or install residential and commercial irrigation systems, a complete lineup of water-saving products make every project profitable and reliable.

New Toro commercial mowing equipment includes:

Soon-to-be-released **Toro® Stand-On Mower**. The stand-on mower caters to landscape contractors who seek a compact, maneuverable stand-on machine that minimizes operator fatigue through enhanced operator comfort, exceptional handling and ease of use. Toro's exclusive design gives the operator the option of riding or walking, depending on property conditions. **Biodiesel-Ready Z**

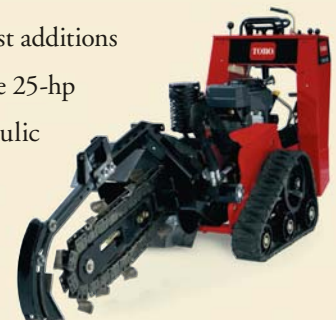

Master® Zero-Turn Riding Mowers. All 2008 Toro Z Master diesel-powered commercial mowers are "biodiesel-ready." The Z Master Z580-D Series is available with a 25-hp Kubota® engine and cutting widths of 52, 60 and 72 inches. The Z590-D Series comes with a 27-hp Daihatsu® engine and 60- or 72-inch cutting widths.

Returnable Steel Crates For Mowers. Switching to returnable steel crating for Toro's commercial Z mowers and stand-on mowers helps reduce wood packaging waste, disposal costs, and setup time for Toro dealers. In fact, more than 100 pounds of wood packaging waste is eliminated with each Z mower.

New Toro compact utility equipment includes:

Toro® Dingo® TX 525 Diesel Compact Utility Loaders. The latest additions to the Dingo family, the TX 525 narrow and wide track compact utility loaders feature 25-hp Kubota® diesel engines and offer extra torque, longer engine life and increased hydraulic flow for enhanced performance of ground-engaging attachments. **Toro TRX**

Walk-Behind Trenchers. Trenching just got easier with the introduction of the Toro TRX-15 and TRX-19 tracked, walk-behind trenchers. Tracks — plus operator-friendly controls — make these gas-powered machines more productive than typical wheeled trenchers, providing significant benefits to rental yards, contractors and homeowners.

TORO®

Professional Contractors (cont.)

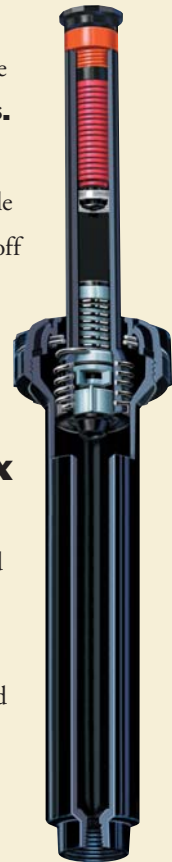

New Toro irrigation solutions include:

Intelli-Sense™ Controllers. Toro Intelli-Sense Series controllers ensure landscapes receive the right amount of water — no more, no less. The proprietary WeatherTRAK® technology automatically calculates the optimum watering schedule based on weather data received via the ET Everywhere™ data service. Irrigation schedules are automatically adjusted daily in response to changing weather conditions. **TPV Valves.** Toro's newest

1-inch valve offers professional-grade features including flow ranges from 0.1 to 40 GPM and a 175 PSI pressure rating, making them ideal for everything from drip to high-flow applications. The patented Debris Bypass System ensures valve functionality in nearly all dirty water applications. **TR Series Stainless Steel Rotors.** These rotors offer the designer or municipal account choice of a stronger product for areas where vandalism and liability are primary concerns. Equipped with a durable stainless steel riser and nozzle assembly, these rotors also feature the TruJectory™ nozzle spray adjustment and X-Flow® water shutoff for the ultimate in flexibility. **T5 Rotor.** This new rotor has the features to satisfy all the basic

irrigation needs while surprising you with a few extras. In the same size body as competitive units with only a 4-inch pop-up, the new T5 delivers a full 5-inch pop-up height. Includes innovative new nozzle technology for superior water efficiency. **570ZPRX Spray Head.** This is the ultimate spray head for those desiring unmatched water efficiency. By combining the patented X-Flow and pressure-regulation technologies into one riser, the 570ZPRX stabilizes the performance of the system at approximately 30 PSI from the first head to the last, and ensures no water is lost if the head gets mowed off.
